SUMMARY

Developer with knowledge in Front-end, Back-end, artificial intelligence agents and databases, in addition to familiarity with agile methodologies and software engineering. I seek to start my professional career and acquire experience in larger-scale projects that present greater technical challenges.

SKILLS

- **Hard Skills:** Agile scrum, Typescript, Javascript, Python, React Native, Next.js, Tailwind, REST API, Node.js, Flask, Springboot, SQL e NoSQL (MongoDB e Redis) and AI Agents.
- **Soft Skills:** High adaptability, proactivity, analytical thinking and lifelong learning
- **Languages:** English (C2) and Spanish (A2)

PROJECTS

TrackerFi

Sep 2025 - Dec 2025 The project is a platform for controlling and analyzing cryptocurrency portfolios, integrating real-time quotes and offering tools to monitor various wallets simultaneously. -

- Developed a comprehensive full-stack mobile application for real-time cryptocurrency portfolio tracking across multiple blockchain networks. Built a TypeScript/Node.js backend with Express, MongoDB as database, and integrated Zerion and CoinGecko APIs for wallet analytics and market data. Implemented automated data synchronization using GitHub Actions workflows, JWT-based authentication, and price alert notifications. Frontend developed in React Native/Expo for mobile deployment.

NectoPoint

Jan 2025 - Jul 2025 NectoPoint is an Electronic Time Clock Management System for organizations. Automates time clock registration, controls overtime, vacations, and days off, generates reports, and sends alerts, ensuring labor compliance. With a friendly interface, it facilitates real-time control, increasing efficiency, and reducing errors.

- I acted as a Scrum Master, planning the project structure and sprints with the Product Owner, collaborating to select which requirements to address in each sprint, ensuring a clean development flow and meeting client expectations.
- In the final weeks of each sprint, I also developed front-end pages and components, like the main component for clocking your turn for the user and a small dashboard for the admin to see what the users status, mainly using React.js and tailwind CSS.

EDUCATION

Multiplatform Software Development

April 2024 - (Est.) Dec 2026 FATEC São José dos Campos - Prof. Jessen Vidal
